

Capstone Project: GNN Drug Research Resources

This document contains the curated list of essential resources for your project on using Graph Neural Networks to screen drugs against *Klebsiella pneumoniae*.

Resource	How it Helps the Project
TeachOpenCADD T035	Foundation: Best theoretical guide for graph encoding and building GNN layers.
PubChem PUG-REST API	Data Acquisition: Essential for programmatic data and SMILES retrieval.
LivingInSilico TB GNN	Technical Benchmark: Study model architecture and data loaders.
LivingInSilico TB Predict	Inspiration: Great template for your project's final deliverable interface.
ChemDoodle SMILES	Visualization: Useful for debugging and visualizing individual molecule structures.
ChemRxiv GNN Research	Literature Review: Provides academic justification for using GNNs.
FPPool (GitHub)	Advanced Methodology: Potential techniques to optimize graph information aggregation.
PubChem Periodic Table	Data Mapping: Quick reference for atomic weights and node feature properties.

Note: Prioritize studying the TeachOpenCADD T035 tutorial and the LivingInSilico GitHub repository to build a strong technical foundation for the pipeline.
